# DOCUMENT AI

Uses machine learning, natural language processing, and optical character recognition to automatically read, classify, and extract structured data from unstructured or semi-structured files

## Intelligent Document Processing

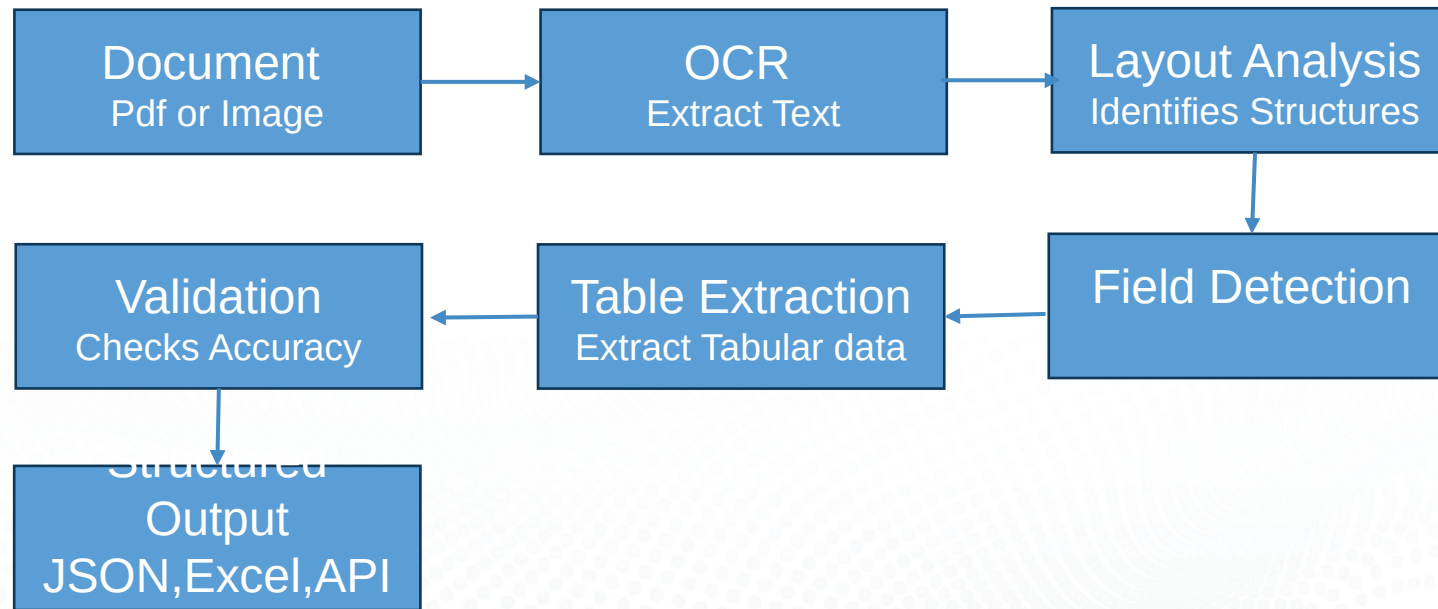

A screenshot of a software interface titled "Search [Advanced]". It features a "By Example" tab and a search bar labeled "Enter values for search". Below the search bar is a list of search criteria, each with a dropdown menu set to "Equal" and an adjacent input field. A red arrow points to the first dropdown menu.

| Field         | Operator | Value |
|---------------|----------|-------|
| File No.      | Equal    |       |
| File Name     | Equal    |       |
| File Category | Equal    |       |
| File Subject  | Equal    |       |
| Doc Type      | Equal    |       |
| Doc Date      | Equal    | //    |
| Folio No.     | Equal    |       |
| Reference     | Equal    |       |
| Doc Num       | Equal    |       |

# DOCUMENT AI

## Building blocks

# DOCUMENT AI

## Key Trend Shaping Document AI

- **Cross-Document Reasoning:** Systems are moving beyond extracting data from a single PDF. AI agents reconcile multiple files simultaneously—such as matching tax returns, bank statements
- **Mastery of Unstructured Content:** Advanced multimodal models combine computer vision and language processing to understand messy layouts, handwriting, multi-lingual contracts, and low-quality scans without rigid rules.
- **Document Management as Infrastructure:** Traditional static storage fails for AI. Organizations are upgrading document repositories into active, governed data layers to prevent retrieval-augmented generation (RAG) errors from outdated files.
- **Human-in-the-Loop (HITL) Validation:** As automation scales up, human oversight remains critical in high-risk sectors (like healthcare and finance) to ensure compliance, auditability, and error correction.
